

## **Adding Life to Our Roots**

**Ar. Bindu Malhotra,**

Nitte School of Architecture Planning and Design, Bangalore

bindumalhotra20@gmail.com

### ***Abstract***

*Everything is going to be history. Buildings and monuments of today will be heritage tomorrow. The whole foundation of Life is on Sanskars and Traditions which we want to save. Similarly, our Heritage depicts our architectural Sanskaras. Restoration and rehabilitation are not only limited to human lives, it is also important for the entire Heritage which is going into a handicapped stage. Environmental, expansion and lack of awareness, legal rules, terrorism, urbanization, pollution, and terrorism – nothing can be the Real excuse of leaving and letting our foundation get eroded. When hungry - food is not taken, when sick medicine is not taken, for real serious diseases even Surgery is performed. Similarly, heritage also needs to be fed and treated.*

*Specialization in all the Industries is on Boom and skills in all the fields are being executed with marvelous outcome. Bringing back to Breath all our heritage with skills of special Conservation Doctors is also of utmost importance. As walking without feet is not possible, similarly building a Nation Without our Foundation - Heritage is not possible. Our heritage depicts our richness, culture, values and brings economy and beauty to country. In a competition of Making new foundations and growing fresh roots yesterday beauty is lying under wraps.*

*My aim is to get some more Souls to join hands, heart and brains and to bring back Life, Aroma and Soul to the most forgotten richness Our Heritage. Our Country has very rich Heritage spreading to Forts, museums, Palaces and Temples etc.*

**KEYWORDS-**Heritage, conservation, restoration, rehabilitation, adaptive re-use,  
monuments
